Captures, stores and shares content – across the enterprise

By capturing, storing and managing documents and information electronically in a secure, central location, users in any department have instant access to whatever they need. Decreasing your dependency on paper also optimizes processes and decreases costs and risks.

Relying on paper begins with unnecessary storage costs and usually ends with lost documents, audit issues and fines. With OnBase, you manage electronic documentation according to easily configurable retention periods, with automatic destruction when necessary. And, not only is access instant, it's also secure, with audit trails automatically detailing who accessed what and when, as well as what actions they took.

Most core systems only handle banking documents, so they can't span your entire enterprise. OnBase is built to be flexible, so it can capture any type of document type, including any type of report from cores. And, you can deploy it in a single department or enterprise-wide. It's all up to you and your needs. Not another information silo, OnBase is an easily accessible, central location that stores and manages all your content.

Provides data analysis for better decision-making

With advanced data analysis, you gain meaningful insight about trends. You're also empowered to make better decisions to support growth. OnBase also gives organizations increased transparency into documents, information and processes. Executives and managers gain improved visibility using a dashboard that presents an overview of critical information in one easy-to-read screen, so they see how processes are working in real time.

Not only does it increase the ability to share information internally and externally, OnBase also helps identify roadblocks and measure the effectiveness of processes. By measuring key performance indicators and process statistics, management optimizes processes, creating a competitive advantage in the marketplace.

Improved data accuracy also equates to increased worker efficiency, so they focus on the real core of your business: customers and members.
