

## Uniquely Qualified Partners to Upgrade Legacy Oracle ECM to OnBase

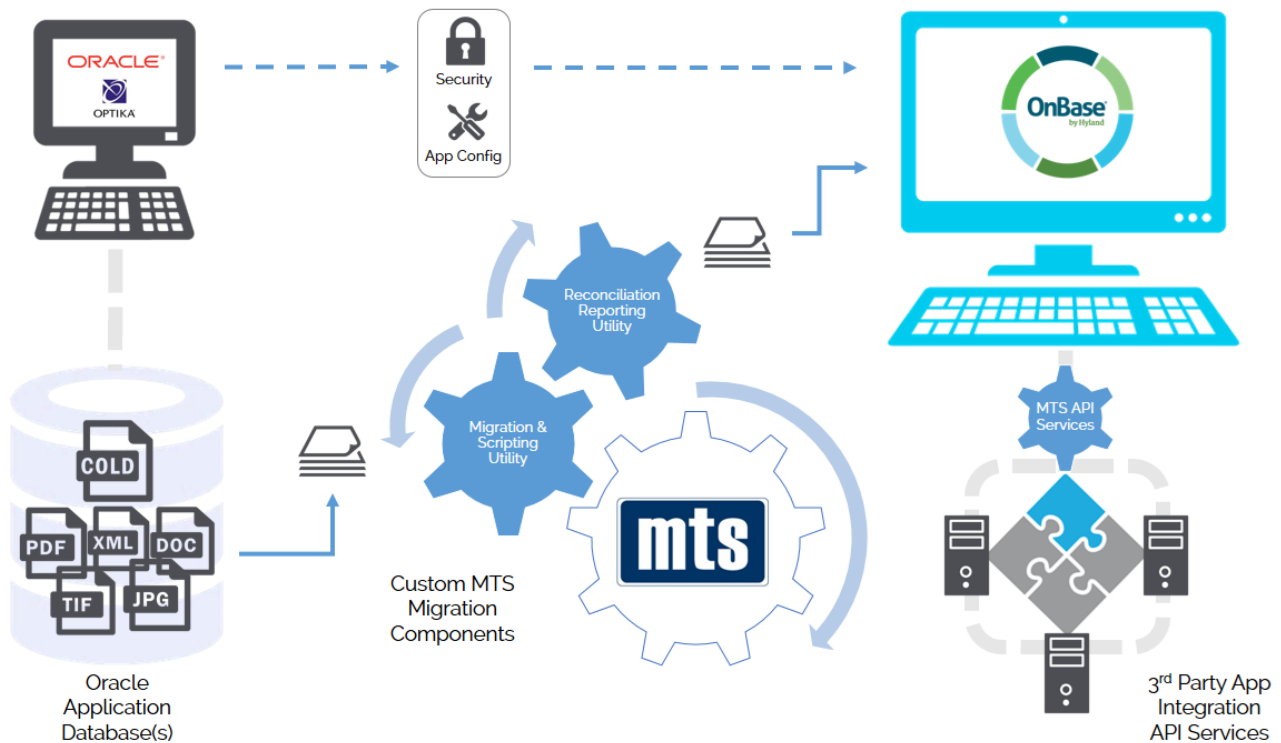

### Summary

For twenty years, MTS Software Solutions has been a Stellent Enterprise Content Management (ECM) solutions provider. During that time, there have been many changes in the ECM industry, including the acquisition of Stellent Inc. by Oracle and the end-of-life of legacy products, such as Stellent.

As a result, customers that continue to use Stellent Imaging & Business Process Management (Stellent iBPM), which was later re-branded as Oracle Imaging & Process Management (Oracle I/PM 10gR3), are realizing that they can no longer proceed with their existing outdated applications. As an OnBase Gold & Diamond Support Partner, MTS Software Solutions has developed an optimized conversion process to migrate data from Stellent/Oracle to OnBase by Hyland.

With certified Oracle and OnBase engineers, MTS Software Solutions has successfully migrated over 20 Stellent/iBPM customers to OnBase. As a result, we've developed custom utilities to migrate data as well as maintain 3rd application integrations with our API services middleware. Our experience in executing seamless Stellent migrations makes choosing MTS Software Solutions for your migration an easy decision.

### Migration Workflow & Custom Components

## Solution Spotlight

Conversions >> Oracle to OnBase Conversion

### Why Migrate?

Stellent iBPM or Oracle I/PM customers are ultimately confronted with two options: upgrade to Oracle IPM 11g or migrate to another ECM/BPM product. Because Oracle IPM 11g is an entirely new ECM product platform built on an entirely new architecture, there is not a clear and simple upgrade path for legacy customers. Therefore, they must convert legacy data & documents, rebuild workflows, redesign security, redevelop retention plans, etc.

This, in essence, represents a migration.

### Migration - Not just one option, it's the only option.

The choice to migrate to Oracle 11g comes at a steep cost. In addition to the premium professional services costs that Oracle or an Oracle partner will charge to upgrade to 11g, there are many other resource requirements that Stellant to which existing Stellant customers may not be accustomed.

What was once a Windows-based architecture is now a Java-based application that runs on Oracle's Weblogic Application Servers. There is no native, built-in workflow interface or engine which means you'll be required to use other Oracle middleware products. The licensing restrictions for Oracle IPM are based on the number of servers that on which it is running. This could consume more of the server's resource usage or more of your budget.

All of these resource requirements must be weighed against choosing a more flexible, easier-to-use, Windows-based product from a company that is focused on ECM solutions, such as OnBase by Hyland.

### About MTS Software Solutions, Inc.

MTS Software Solutions provides technology and services that simplify, streamline, and accelerate document and data-driven processes.

As a 2015 OnBase Gold & Diamond Support Partner, we offer the experience and expertise required to deliver an Enterprise Content Management (ECM) solution that meets each of our customers' unique business requirements.

We aim to elevate profits and productivity through business process automation software, document imaging solutions, business process outsourcing, check scanners, document scanners, and document conversion services.
